

Your World, Your Money

A GLOBAL THINKING FOUNDATION USA PODCAST

Net Zero By 2050:

- With experience working in international development and public health, Jamie has witnessed how corporate enterprise affects climate change.
- Though the U.N. established Net-Zero by 2050 has been adopted by many corporations, Jamie believes these corporations should take on more leadership with more ambitious timelines. "The last person needs to get across by 2050" is her perspective, not "the leaders."

Changing The System From The Inside:

- Jamie encourages employees at all companies to speak up whenever possible for environmentally conscious decisions. She has aided this process at companies like Netflix and Amazon and believes it's vital that individuals begin working for climate solutions in their personal and professional lives.
- Employees can enact change at their companies by ensuring company 401ks don't invest in fossil fuels but instead in climate solutions. More minor changes employees can influence include cleaner energy offices or biodegradable work materials.

Additional Takeaways From Jamie:

- Drawdown Labs' report, [Climate Solutions At Work](#), offers various other ways anyone at any corporate enterprise level can begin advocating for environmentally conscious decisions/changes within their organization. To obtain the publication, [sign up here](#).
- In corporate or personal investing, in order to divest away from fossil fuels, more eco-conscious options are necessary. To explore the options, a resource guide of eco-friendly options is available at fossilfreefunds.org.

Season 3, Episode 08:

Corporations and Climate: Consumer, Investor, and Employee

Guest: Jamie Beck Alexander, Director of Drawdown Labs
